

This week's update (Week 23, 2020)

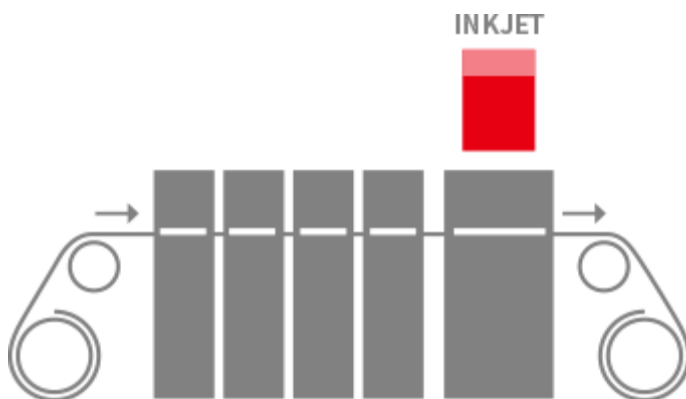

Stream Jet products & system integration

Stream Jet is a single-pass inkjet printer with a high resolution piezo IJ head. Our motto is to provide a true production printer that can withstand high-speed, real-world production.

What **Stream Jet** can do

1. Maximum print width of 895 mm for single color and a maximum print width of 445 mm for full color!
2. Print speeds up to 150m/min (490feet/min)!
3. Depending on the speed of the transport or press installed, **you can follow the acceleration / deceleration** instead of the constant speed!
4. **You can fine-tune the inkjet print output position vertically and horizontally** during printing!

Example of system integration

- ✓ Flexography Press
 - ✓ Rotary Offset Press
 - ✓ Rotary Letter Press
 - ✓ Intermittent Letter Press
 - ✓ Sheet-fed transport system
 - ✓ Slitting machine
 - ✓ Inspection machine
- and more!
