

This week's update (week 24, 2020) ~Software~

Introducing the layout software and RIP system we are working on.

VIPS™

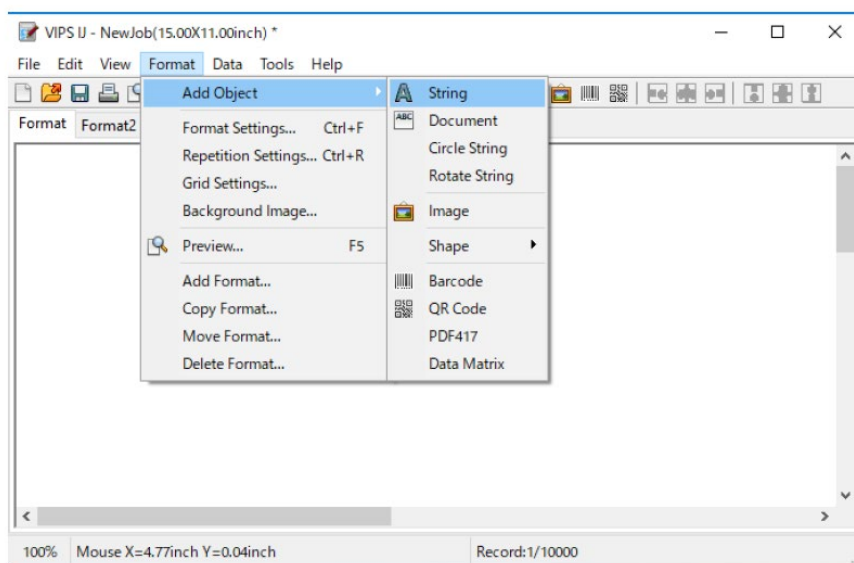

Intelligent Layout Software “VIPS™” **V**ariable **I**nformation **P**rint **S**oftware is a Windows® -based intelligent layout output software program, It can easily create the layout of objects such as barcodes on a Windows® PC using external data such as CSV files. VIPS™ performs on-the-fly processing that can output data at the same time as RIP processing, thereby making printing efficiency remarkably high.

VIPS is only working on monochrome Stream Jet systems, and full-color inkjet systems are available for PDF only.

VIPS™ on
Windows®PC

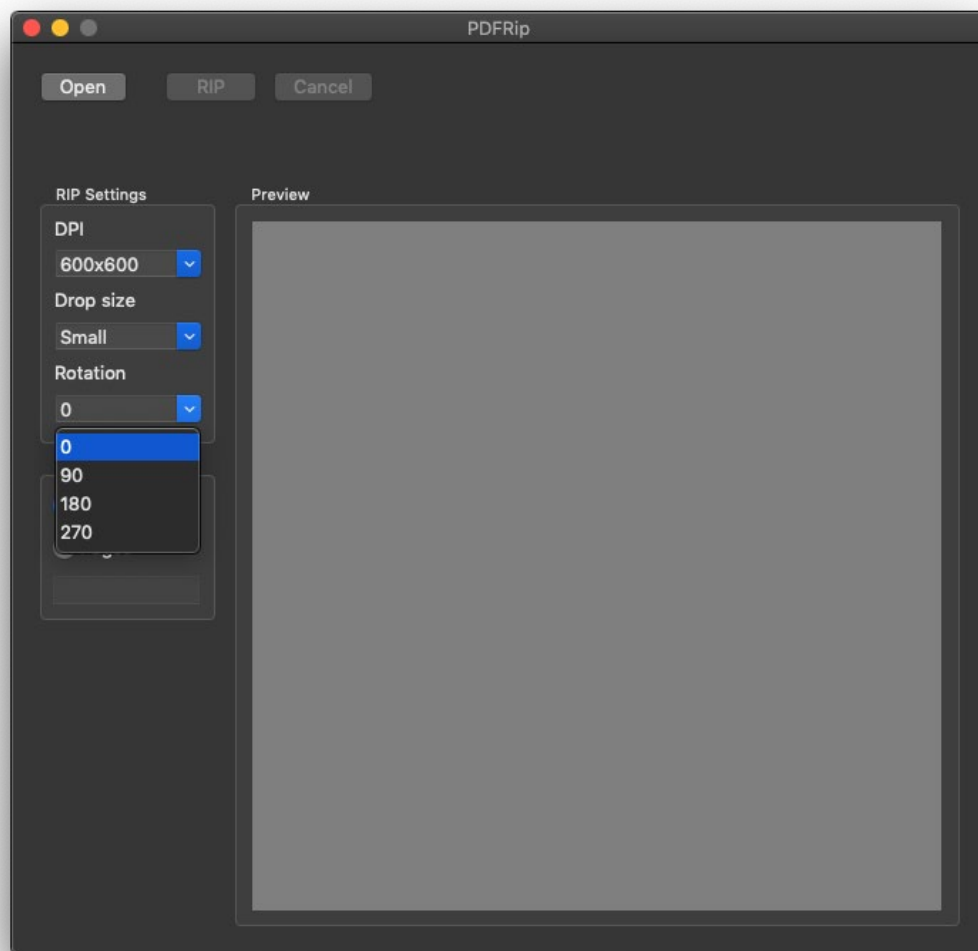

Add Object

RIP system for full color

Our full-color RIP system uses Adobe PDF Print Engine (APPE), and you can select resolution, number of bits, dither type, rotation, etc.

PDF RIP (new)

Introducing PDF RIP, a RIP system that uses the engine of Apple Inc. newly developed by CTC Japan. This RIP system can be performed at high speed and stably without having an expensive RIP system. Requires Mac PC.

For PDF RIP specifications and test requests, please kindly contact our R&D Center. (+81-75-623-8510) 8:30-17:00@JST
