

This week's update (week30, 2020)

~Stream Jet Printing Solution Electronic devices and security~

Printing solutions for electronic devices and security with [Stream Jet](#)

●Electronic devices

[Stream Jet](#)'s solution for printing special unique codes on various electronic devices as part of traceability.

●Security print

1) UV invisible print

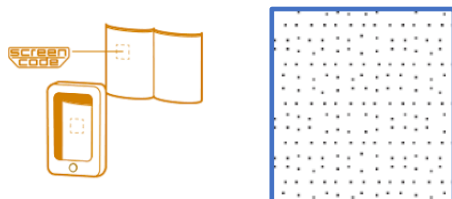

UV invisible ink is an ultraviolet light emitting ink (visualized when irradiated with a UV lamp), and [Stream Jet](#) is used for counterfeit prevention.

2) Screen code

This is an example of [Stream Jet](#) application using the screen code developed by Apollo Japan Co., Ltd. By embedding the "invisible" code (dot printing) in the printed matter with the screen code, information can be embedded without affecting the design of the printed matter.

The best solution for security and traceability.
